DETAILED OFFICE ACTION

Allowable Subject Matter

Claims 1-20 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, *in combination with other limitations recited in the claims*, the limitations of the following:

(as recited in claims 1 and 7)

an improved linear actuator comprising: a retention clutch and an axial collar means of a predetermined length positioned between the threaded shaft and the motor to form a gap area;

(as recited in claim 19)

A kit for linear translating actuator particularly comprising a retention clutch and an axial collar means of a predetermined length.

Comparing to the prior-art of the record, the most relevant prior art is US 6,734,582 to Corbett Jr. et al. Corbett discloses a similar linear actuator but not having the retention clutch to reduce the impact loads on the stop; and the axial collar means of a predetermined length positioned between the threaded shaft and the motor to form a gap area, when the screw encounters axial loads during operation, the axial collar means acting as loads distributed across both the axial load limiter and the motor, thereby reducing direct forces on the motor and contributing to an extended use of the motor component.

Thus, none of the prior art references of the record, either stand-alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
